Дисциплина: Фронт-энд разработка

Отчет

Лабораторная работа №3

Выполнил: Самаров Илья
К33402

Проверил:
Добряков Д. И

Санкт-Петербург

2023 г.

Задача

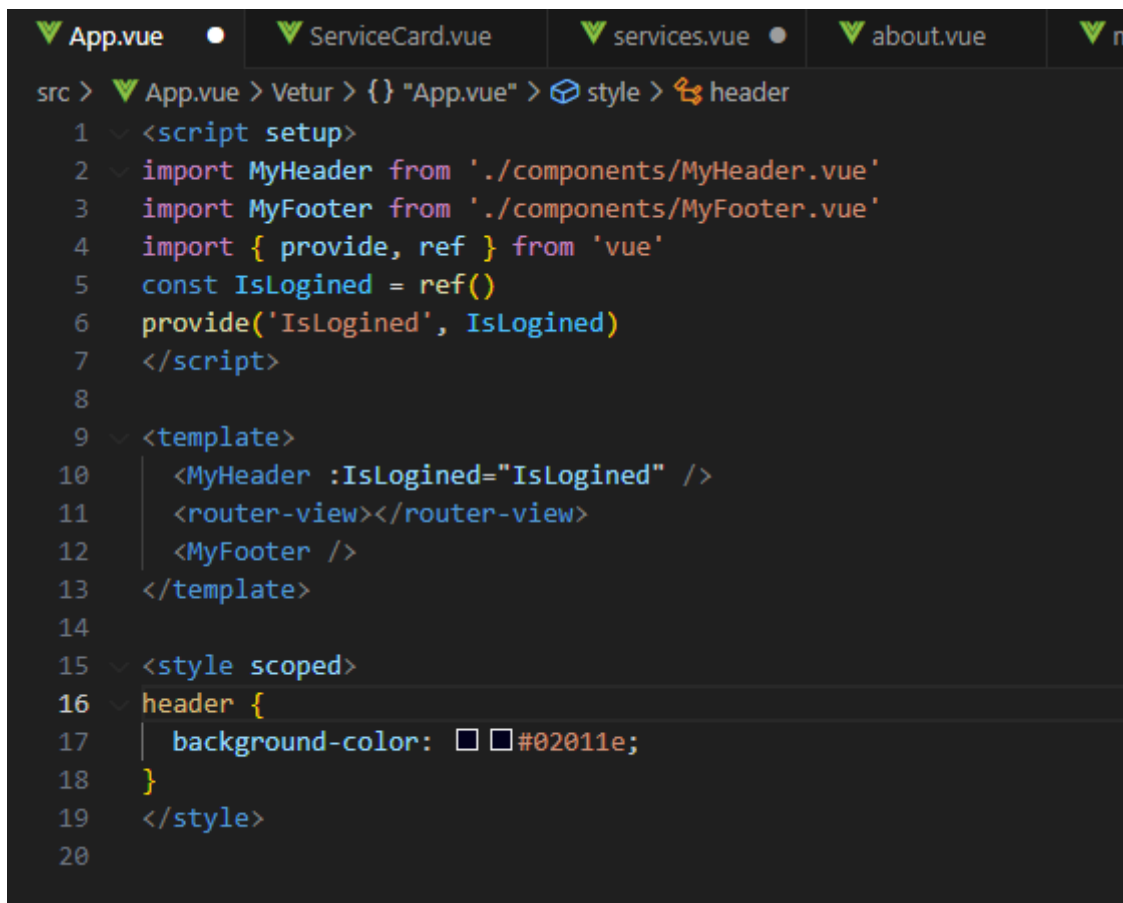

Мигрировать ранее написанный сайт на фреймворк Vue.JS.

Минимальные требования:

- Должен быть подключён роутер
- Должна быть реализована работа с внешним API
- Разумное деление на компоненты
- Использование composables

Ход работы:

Создаю App.vue – главный компонент, с его помощью я отображаю страницу. Header, Footer – постоянные, RouterView же меняется, в зависимости от страницы.

```
src > App.vue > Vetur > {} "App.vue" > style > header
1 <script setup>
2 import MyHeader from './components/MyHeader.vue'
3 import MyFooter from './components/MyFooter.vue'
4 import { provide, ref } from 'vue'
5 const isLoggedIn = ref()
6 provide('isLoggedIn', isLoggedIn)
7 </script>
8
9 <template>
10   <MyHeader :isLoggedIn="isLoggedIn" />
11   <router-view></router-view>
12   <MyFooter />
13 </template>
14
15 <style scoped>
16 header {
17   background-color: #02011e;
18 }
19 </style>
20
```

Создаю компоненты, которые будут отображать каждую страницу.

MyHeader - шапка сайта

MyFooter - Футер сайта

ServiceCard - конструктор карточки услуги

CardList - Вывод всех карточек услуг на страницу услуг

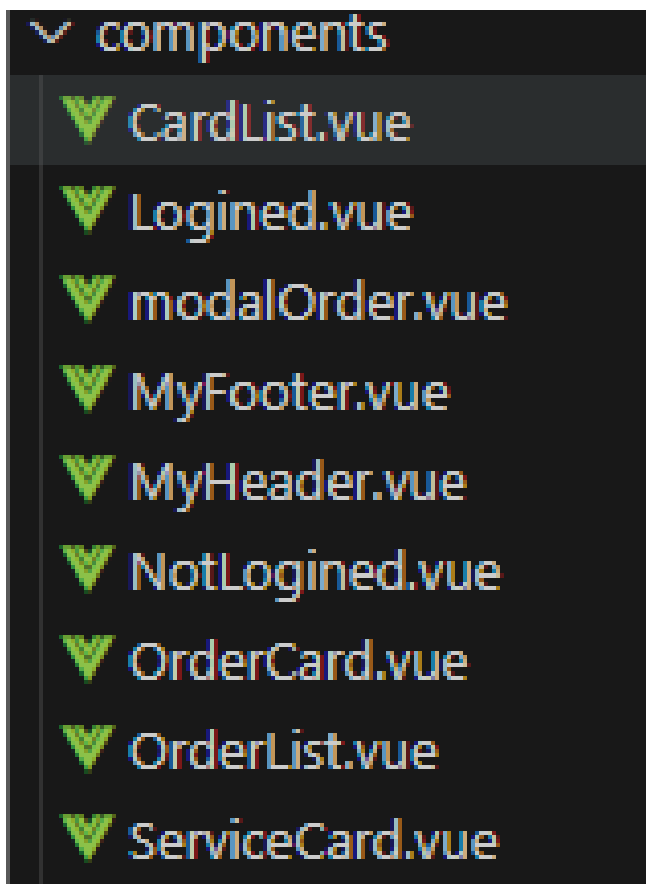

OrderCard - конструктор карточки заказа

OrderList - Вывод всех карточек заказов в профиль

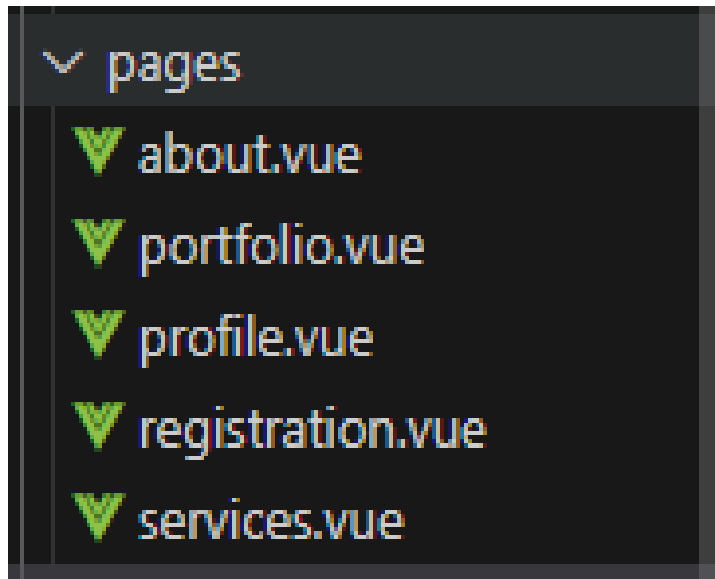

Logined - компонент шапки, отображаемый, когда пользователь
залогинен

NotLogined - компонент шапки, отображаемый, когда пользователь
не залогинен

Modal order - модальное окно заказа услуги

Создаю pages для всех страничек.

About.vue:

```
<template>
  <div class="container-fluid textabout">
    <div class="d-flex flex-row justify-content-evenly align-items-center">
      <div class="d-flex flex-column border-top">
        <h1 style="text-align: center; padding-top: 10px">About me</h1>
        <h2 style="text-align: center">I'm front-end developer from Saints-Petersburg</h2>
        <h3 style="line-height: 1.5; padding-top: 15px">
          I'm striving to create innovative and visually appealing user interfaces<br />
          with over two years of experience in frontend development.<br />
          I have a deep understanding of modern web technologies, standards and trends,<br />
          as well as experience in working in a team to achieve outstanding results
        </h3>
        <router-link
          to="/services"
          type="button"
          class="buybutton text-uppercase"
          href="services.html"
          style="padding-top: 33px"
        >
          <h3>View my services</h3>
        </router-link>
      </div>
      
    </div>
  </div>
</template>
<style scoped>
1 reference
.textabout {
  min-height: 100vh;
  padding-top: 100px;
}
1 reference
.myphoto {
  max-width: 900px;
  max-height: 700px;
}
0 references
.aboutmetext {
  padding-top: 150px;
}
1 reference
.buybutton {
  display: block;
  background-color: #02011e;
  color: #8738f8;
  margin: auto;
  width: 66%;
  height: 100px;
}
```

portfolio.vue:

```
<script setup></script>
<template>
  <div class="container-fluid" style="height: auto; padding-top: 50px; padding-left: 100px">
    <h1>Samarov Ilya</h1>
    <h5>Male, 20-year-old</h5>
    <br />
    +7(911)2975849 - <span class="port-subt">preffered method of communication</span> <br />
    samarov2012@gmail.com
    <br />
    <br />
    Lives: St. Petersburg Citizenship: Kazakhstan, work permit: Russia <br />
    Not ready to move, ready for business trips
    <br />
    <br />
    <br />
    <div class="port-subh">
      Desired position and salary
      <hr width="50%" />
      <br />
    </div>
    <h6>Frontend Developer</h6>
    Specializations: <br />
    - Programmer, Developer Employment: full-time <br />
    Work schedule: full day<br />
    Desirable travel time to work: not relevant<br /><br />
    <div class="port-subh">
      Work experience - 2 months
      <hr width="50%" />
      <br />
    </div>
    <div class="row">
      <div class="col-1 port-subt">
        July 2022 - August 2022 <br />
        2 months
      </div>
      <div class="col-11">
        <h5>Kaspi Bank</h5>
        <h6>Programmer-developer</h6>
        Internship, writing code with the team.<br />
      </div>
    </div>

    <br /><br />
    <div class="port-subh">
      Education
      <hr width="50%" />
    </div>
    Higher<br /><br />
  </div>
</template>
```

Profile.vue:

```
<script setup>
import OrderList from '../components/OrderList.vue'
import useApi from '@composable/useApi'
import { onMounted } from 'vue'
const { ordersApi, orders } = useApi()
const username = JSON.parse(localStorage.getItem('user')).id
onMounted(ordersApi)
</script>

<template>
  <div class="container-fluid" style="min-height: 100vh; padding: 30px">
    <h3>Welcome, {{ username }}!</h3>
    <h4>Here you can see your orders</h4>
    <OrderList :orders="orders" />
  </div>
</template>
```

Registration.vue

```
<script setup>
import useApi from '@composable/useApi'

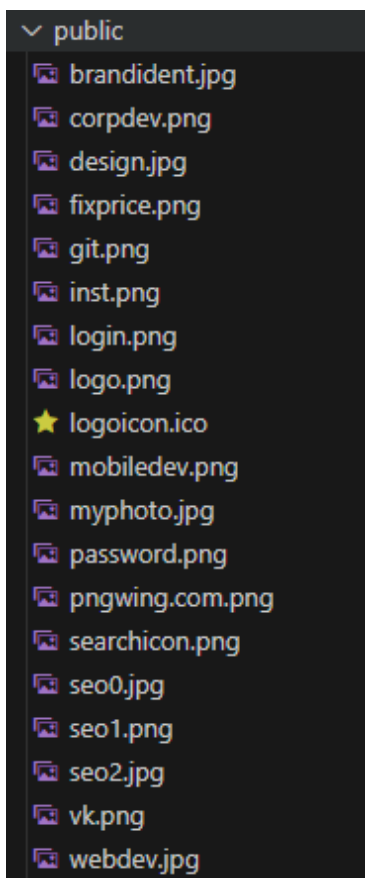

const { registerApi } = useApi()
</script>

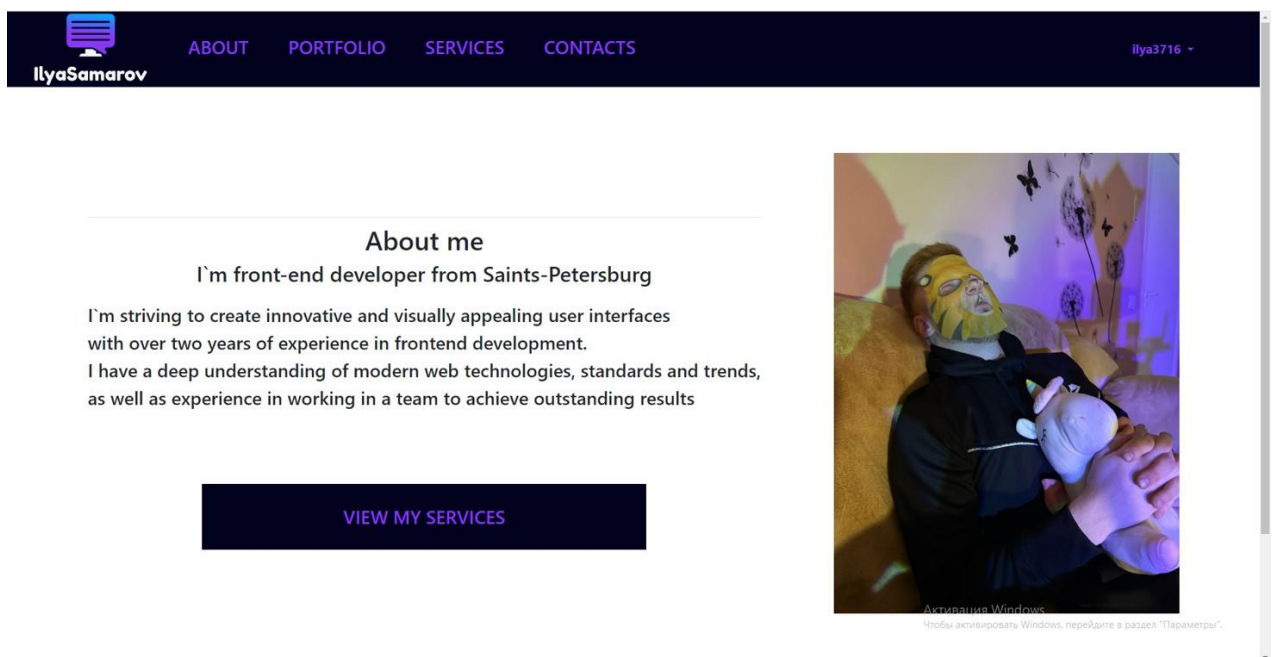

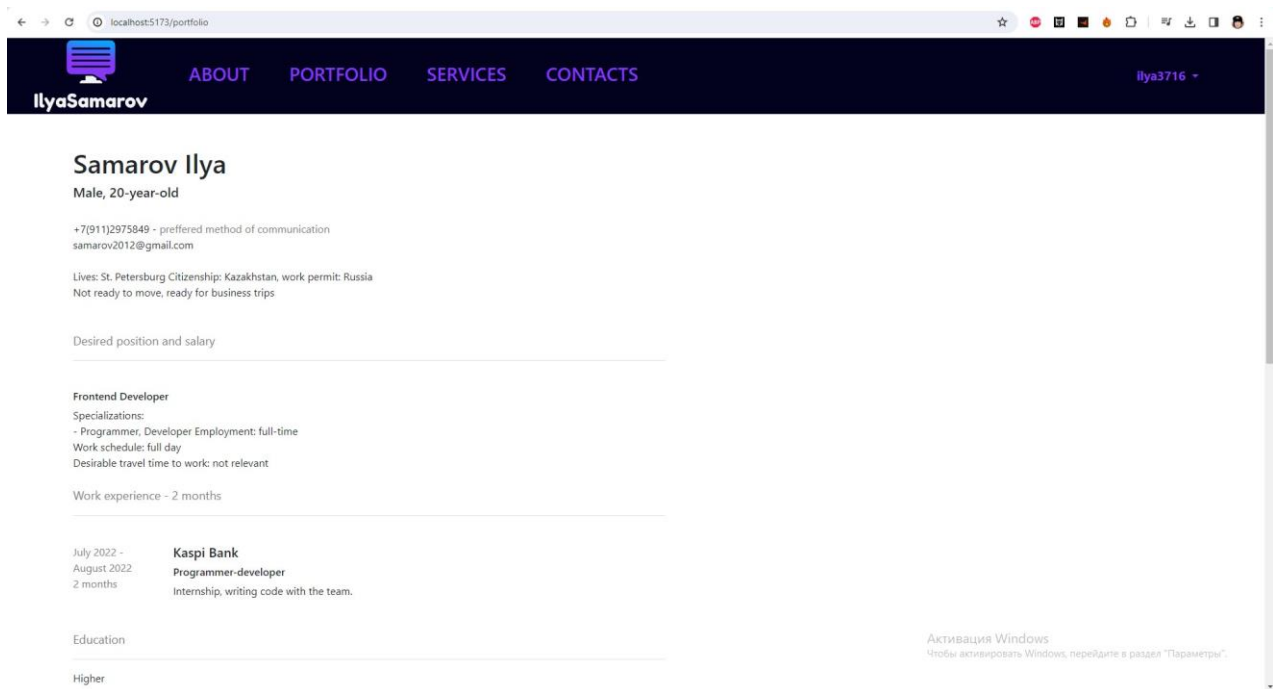

<template>
  <div class="container-fluid register">
    <h1 style="padding-top: 75px">Welcome to the registration page!<br /></h1>
    <h4 style="padding-bottom: 30px">
      <br />Thanks for using my website, I hope you enjoy my services and we can cooperate!
    </h4>
    <hr />
    <form @submit="registerApi">
      <div class="d-flex flex-column justify-content-center border-right" style="padding-left: 33px">
        <div class="d-flex flex-column RegObj">
          <label for="regusername">Username</label>
          <input
            type="text"
            name="id"
            id="regusername"
            style="width: 25%; min-width: 150px"
            autocomplete="off"
            required
          />
        </div>
        <div class="d-flex flex-column RegObj">
          <label for="regemail">Email</label>
          <input
            type="email"
            name="email"
            id="regemail"
            style="width: 25%; min-width: 150px"
            autocomplete="on"
            required
          />
        </div>
        <div class="d-flex flex-column RegObj">
          <label for="regpass">Password</label>
          <input
            type="password"
            name="password"
            id="regpass"
            style="width: 25%; min-width: 150px"
            autocomplete="on"
            required
          />
        </div>
        <button type="submit" class="regbtn">Register</button>
      </div>
    </form>
```

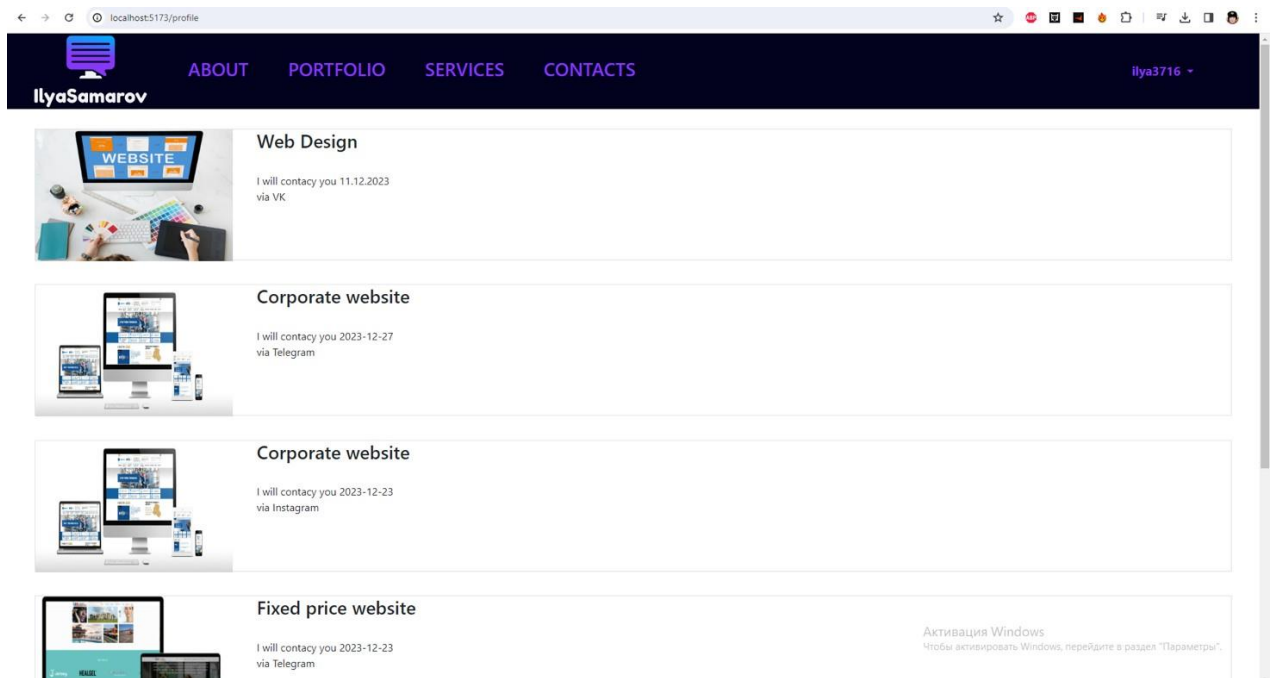

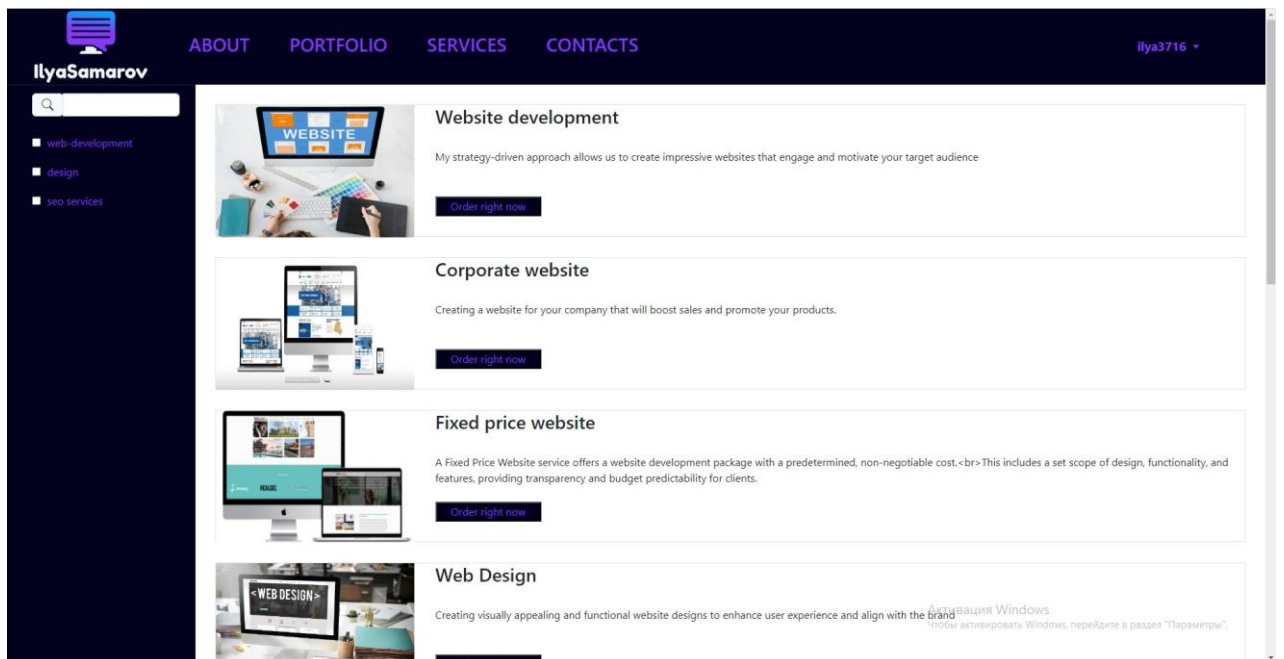

Создаю Роутер, добавляю взаимодействие с ним в index.js

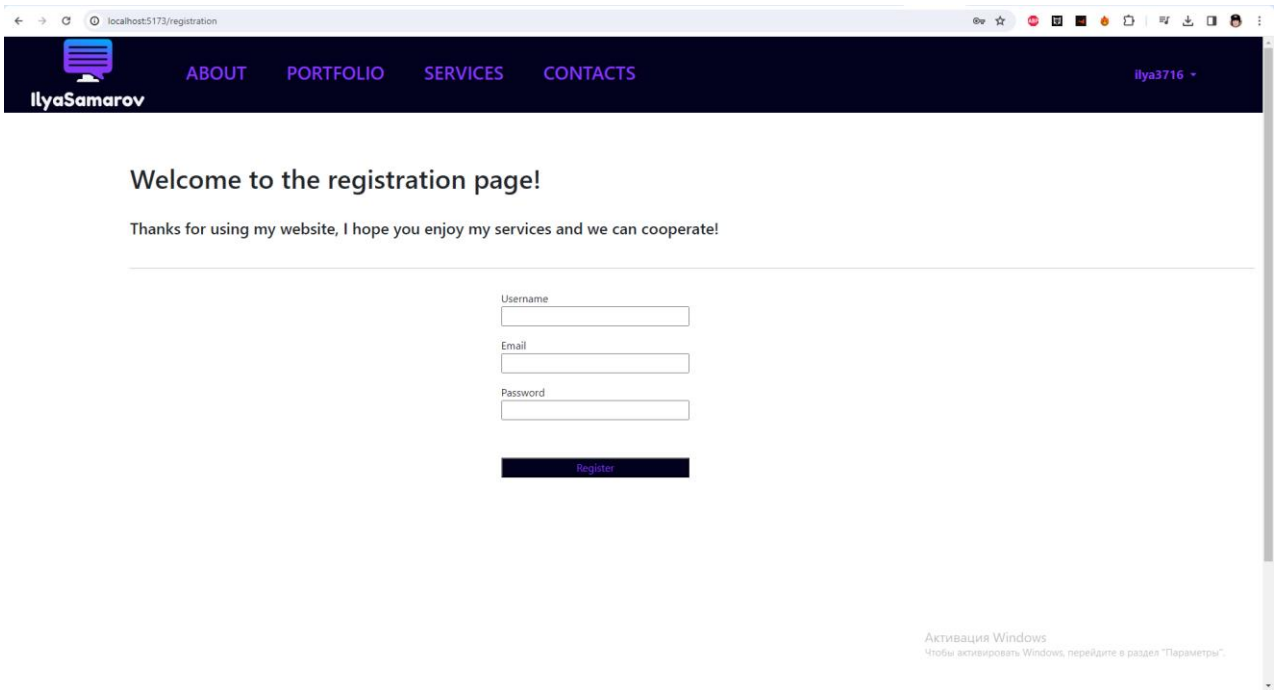

```
const routes = [  
  { path: '/services', name: 'services', component: services },  
  { path: '/about', name: 'about', component: about },  
  { path: '/portfolio', name: 'portfolio', component: portfolio },  
  { path: '/registration', name: 'registration', component: registration },  
  { path: '/profile', name: 'profile', component: profile }  
]  
  
const router = createRouter({  
  history: createWebHistory(),  
  routes  
})
```

Добавляю картинки

Также в логике сайта был использован composable: useApi.js:

```
import axios from 'axios'
import { ref } from 'vue'
import bootstrap from 'bootstrap/dist/js/bootstrap.bundle.min.js'
import { router } from '@main'
const currentName = ref('')
const currentSrc = ref('')
const orders = ref([])
const items = ref([])
const SearchQuery = ref('')
const filters = ref({})
export default function useApi() {
  const loginApi = (loginData, username) => {
    axios
      .post('http://localhost:3000/login', loginData)
      .then(function (response) {
        const { data } = response
        const { accessToken, user } = data
        localStorage.accessToken = accessToken
        localStorage.user = JSON.stringify(user)

        username.value = user
        const btnClose = document.getElementById('btnClose')
        btnClose.click()
      })
      .catch(function (error) {
        console.log(error)
        alert('email or password is incorrect')
      })
  }

  const ordersApi = async () => {
    const username = JSON.parse(localStorage.getItem('user')).id
    let url = `http://localhost:3000/orders?username=${username}`
    const { data } = await axios.get(url)
    orders.value = data
  }

  const servicesApi = async () => {
    try {
      let url = `http://localhost:3000/services?q=${SearchQuery.value}`
      for (let check of filters.value) {
        url += `&Group=${check}`
      }

      const { data } = await axios.get(url)
      items.value = data
    } catch (err) {
      console.log(err)
    }
  }
}
```

```

const orderApiPost = async (event) => {
  event.preventDefault()
  const date = document.getElementById('startDate').value
  const type = document.getElementById('comType').value
  var user = localStorage.getItem('user')
  var profileUsername = JSON.parse(user).id
  await axios.post('http://localhost:3000/orders', {
    Head: currentName.value,
    date: date,
    type: type,
    imgSrc: currentSrc.value,
    username: profileUsername
  })
  alert('Ordered!')
  currentName.value = ''
  currentSrc.value = ''
  document.getElementById('closeOrderModal').click()
}

const registerApi = async (event) => {
  event.preventDefault()

  const inputs = Array.from(event.target.querySelectorAll('input'))
  const loginData = {}

  for (const input of inputs) {
    loginData[input.name] = input.value
  }

  console.log('login data', loginData)
  try {
    await axios.post('http://localhost:3000/users', loginData)
    router.push('/services')
    new bootstrap.Modal(document.getElementById('modal-reg')).show()
  } catch (err) {
    alert(err.response.data)
  }
}

return {
  loginApi,
  ordersApi,
  orders,
  servicesApi,
  items,
  SearchQuery,
  filters,
  currentName,
  currentSrc,
  orderApiPost,
  registerApi
}

```

useLogin.js:

```
import { ref } from 'vue'
import { router } from '@/main'
import useApi from '@/composable/useApi'

const { loginApi } = useApi()
const username = ref(localStorage.getItem('user'))
export default function useLogin() {
  const login = async (event) => {
    event.preventDefault()
    const inputs = Array.from(event.target.querySelectorAll('input'))
    const loginData = {}

    for (const input of inputs) {
      loginData[input.name] = input.value
    }
    loginApi(loginData, username)
  }

  const logout = () => {
    localStorage.clear()
    username.value = ''
  }

  const profile = () => {
    router.push('/profile')
  }

  const openReg = () => {
    router.push('/registration')
    document.getElementById('btnClose').click()
  }

  return {
    username,
    login,
    logout,
    profile,
    openReg
  }
}
```
